

PRACTICAL SOLUTIONS FOR EARTH'S ECOLOGICAL RESTORAION & PRESERVATION

- **Options to clean pollution contamination and promote ecological restoration & preservation.**
- **Eco Allies' fast growth SuperGreenTree® (SGT) cleans the air soil & water w/nature's science.**
- **Eco Allies' products remove carbon, methane, and can clean up fossil fuel & chemical spills.**
- **The SuperGreenTree using its anchor root system remediates contaminated air soil & water.**

Climate Cure Capital® - Climate Cure Capital's expertise is in SGT project design and management, implementing greenhouse gas reduction methodologies and in brokering resulting carbon offset credits.

Eco Allies® The SuperGreenTree was developed by Climate Cure Capital using its proprietary root-grafting system, not genetic engineering. It's intellectual property was acquired by Eco Allies so Climate Cure can focus on services and developing SGT plantations. SGTs are a high-density, short rotation tree, growing to 60'. They can be harvested in 8 years and will regrow from the same stump 5-6 times. SGTs produce Eco Allies branded livestock feed, biochar, timber, lumber, renewable energy biomass, and for carbon sequestration and land remediation. All while generating methane and carbon offset credits. A 12' beam from an 8-year-old SGT can sell for as much as \$3k, plus the SGT product value of the other 48'.
